(54) Title: A METHOD AND SYSTEM FOR PROCESSING ACTIVITY INFORMATION OF BUSINESS ORGANIZATION

(57) Abstract: An activity information processing system of a business organization stores an activity information definition table matched with activity information, and makes an activity report based on input activity information and a corresponding account of an activity report. To achieve this, a plurality of activity types for respectively defining an activity history of the business organization is displayed. When a user selects at least one of the displayed activity types, a configuration screen matched with "what" and "how" of the activity types is displayed so as to input activity information on the selected activity type. When the user inputs activity information, it is determined whether it is an external activity or an internal activity, a corresponding activity result and an activity information definition table are used to process activity information, and the processed activity information is used to provide an activity report on the activity of the business organization.
